KELGRAY PRODUCTS LTD.

Carbon Reduction Plan

Commitment to achieving Net Zero

KELGRAY PRODUCTS LTD. is committed to achieving Net Zero greenhouse-gas emissions by **2050**.

Baseline emissions footprint

Baseline year: **2026**.

Baseline emissions	tCO_2e
Scope 1	9.24
Scope 2	3.41
Scope 3	29.53
Total	**42.19**

Current emissions reporting

Reporting period: **1 April 2025 to 31 March 2026**.

Current emissions	tCO_2e
Scope 1	9.24
Scope 2	3.41
Scope 3	29.53
Total	**42.19**

Electricity basis: gross totals and reduction targets use the location-based UK grid-average electricity result (3.41 tCO_2e). A supplier or contractual electricity figure does not replace this result. Other purchased energy, where entered, is reported separately within Scope 2.

Coverage and calculation limitations

Reporting scope: Standard CRP. Scope 1, Scope 2 and the PPN 006 subset of Scope 3 (Categories 4, 5, 6, 7 and 9). Checked other sources within these scopes can contribute. Built-in purchases, water supply, electricity losses and hotel stays are not included. Saved entries outside this scope and additional category assessments are retained for Extended mode, not treated as zero activity.

Scope 3 coverage recorded:

Category 4: Upstream transportation and distribution (hired-freight distance estimates classified as upstream, or combined Categories 4 and 9 where the split is not known; counted once in Scope 3).

Category 5: Waste generated in operations (entered operational waste and wastewater treatment).

Category 6: Business travel (entered business transport and staff-owned-car business mileage; built-in hotel stays are not included).

Category 7: Employee commuting (entered car, bus and rail commuting; home-working energy and other modes are not calculated).

Category 9: Downstream transportation and distribution (hired-freight distance estimates classified as downstream, or combined Categories 4 and 9 where the split is not known; counted once in Scope 3).

Scope 3 exclusions: None recorded.

Assessed as not applicable by the organisation: None.

The total covers quantified activity entered using Carbon Verify's available methods and evidenced separate emissions figures. An Included choice does not establish complete coverage of every source in that category. Missing activities and unfinished entries are not zero emissions. The organisation must check the inventory boundary, source evidence and any overlaps before relying on it.

Other exclusions and limitations: This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans. Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard13 and uses the appropriate government emission conversion factors for greenhouse gas company reporting.14 Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements (where required), and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.15 This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body). This is Kelgray's first Carbon Reduction Plan and this reporting period has therefore been adopted as our baseline. Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Emissions reduction targets

Over the next five years, to 2031, we project that emissions will decrease to **35.00 tCO_2e**. This is a reduction of 17.0% against the current reporting period.

Carbon reduction projects

Completed carbon reduction initiatives

We will introduce a cycle to work scheme, which will enable all employees to benefit from use of the cycle scheme and result in 0 employees driving to work. Business travel will be reduced significantly and mitigated by all travel being either by rail or electric vehicle by the end of 2031.

Planned carbon reduction initiatives

All waste produced by the business will be segregated on site and prepared for recycling with a reduced collection frequency due to increasing the waste containers. Therefore, the emissions from the resultant collections will be reduced to be one tenth of the current levels by 2031.

Declaration and sign-off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and the associated technical standard for completion of Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard, using the appropriate UK Government emission conversion factors for greenhouse-gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions has been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors or equivalent management body.
